Reference: V.C. Summer Nuclear Station Expansion

Dear Mr. Terreni and the Public Service Commission:

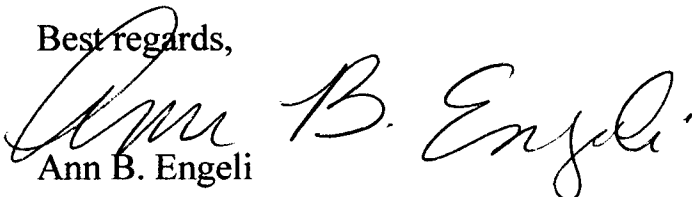

I am so excited about the addition of the two new reactors at the Jenkinsville plant. SCE&G should have done it ten years ago. I own a vacation house on Lake Monticello and have no problem with having the units in "my backyard".

We need nuclear power in South Carolina. It is our only option for providing clean, safe, and reliable energy for manufacturing facilities, especially since phasing out the old coal fired plants is on the agenda. Besides, the two units at the facility are getting old and may have to be taken off line in the foreseeable future. We have to replace them in kind. It is best to do it now.

What South Carolina needs in addition, is a "Breeder" reactor at the Savannah River site to dispose of the nuclear waste stored at the site and the waste that will be produced at the Summer plant while producing electricity for our state and our neighbors.

The new units are a wonderful idea and I totally support SCE&G's proposal.

Best regards,

Ann B. Engeli
